Questions and Answers

14.CAT.OP.054 (ONSIM)

	Question	Answer
1	Tender specifies to focus on air combat and long-range battle management in 2.2 but it is also requesting to open the study to other capabilities in 2.3 … Is the work to be limited to Air combat domain/case? Or is that just one possible application area and the work would need to look more generally at others as well (land, maritime, etc)	First focus should be the two first chosen air domains that needs quick reaction with human final decision. But proposing add-on on other domains is not forbidden.
2	The requirement talks about most of the work being at EDA premises (2.6) Is it mandatory to perform the work in your premises? If not, what are the requirements, if any, for the workplace.	Workplace could be anywhere. Initial and final meeting should take place in EDA Deliverables (documents) are to be send to EDA And when demo/experimentation are planned, the location that is chosen in accordance with all the constraints and needs, taking always in consideration the principles of sound financial management.
3	Demonstrator in WP3 is a deliverable itself? Or do you only want to maintain a digital record of the demonstration?	As meant in the tender specification at page 6 under WP3 "concept demonstration", the deliverable is not only a demonstration. Product issued from a demo is the lessons learned (how it has worked, why that has happened, what was wrong/good in the tools/procedures we have used…?) So a digital record could be an added value to replay or to make official presentations (but not the main deliverable).
